

GPU Pup ($GPUPUP)

White Paper

Hold the pup. He fetches NVIDIA.

gpupup.io · x.com/GPUPUP · October 2026

Overview

GPU Pup is a Solana reward memecoin that pays its holders in NVIDIA stock (NVDAx) just for holding. The promise is one line: **hold the pup, he fetches NVIDIA.**

The coin launched on StonkFun with a fixed supply of 1 billion tokens. Every trade carries a 1% tax, and that tax is paid to holders in NVDAx, a tokenised NVIDIA share. Nothing is minted later and the supply never grows.

The project is built for people who hold. Rewards arrive for holding, the prize pool pays the biggest holders as the coin grows, and the mascot levels up with the market cap: RTX Pup, H100 Pup, then Blackwell Pup. The mascot is also meant to become useful, as an AI assistant for holders (see The AI Pup).

Token facts

The numbers below are fixed and can be checked on-chain.

Item	Detail
Token	GPU Pup ($GPUPUP), Solana, launched on StonkFun
Supply	1,000,000,000, fixed, nothing minted later
Tax	1% on trades, paid to holders in NVDAx
Contract address	`5wsQUG6upPULcFJxKSBHExoMpFrNBnX22hBAFQjrZqDK`
Prize pool wallet	5% of supply (50,000,000 $GPUPUP), public: `BRa3wSFGvRjNHcXGG3cKfwUPvVzbC7Szx8XkCNXqm1XU`
Dev wallet	2.5% of supply (25,000,000 $GPUPUP), locked on Streamflow until 1 Dec 2026
Website	gpupup.io
Community	x.com/GPUPUP and the GPU Pup Telegram

How rewards work

Holders earn NVDAx, a tokenised NVIDIA share, from a 1% tax on every $GPUPUP trade. You do not stake, claim through a farm or lock anything: you hold the token in your own wallet.

1. Someone buys or sells $GPUPUP. A 1% tax is taken as a Token-2022 transfer fee.
2. The collected tax is converted into NVDAx.
3. The NVDAx is paid out to holders.

Payout size depends on trading volume, because the reward is a share of the tax. More trading means more NVDAx to share. Payout thresholds on StonkFun scale with market cap, so rewards arrive in larger, less frequent batches as the coin grows.

Exact eligibility and timing follow the StonkFun reward-token mechanism. The current rules are on StonkFun, and our weekly fetch reports show what has been paid so far. Rewards are a share of trading

activity, not a fixed yield, and they can be zero in a quiet week.

Prize pool and milestone rounds

50,000,000 $GPUPUP, 5% of supply, sits in a public prize pool wallet and is paid to the top 100 holders at three market cap milestones.

Milestone	Market cap	Round	Tokens per wallet (top 100)
RTX Pup	$1M	25,000,000 $GPUPUP	250,000
H100 Pup	$10M	15,000,000 $GPUPUP	150,000
Blackwell Pup	$100M	10,000,000 $GPUPUP	100,000

How a round runs:

1. The coin reaches the milestone and we announce it.
2. A snapshot of holders is taken at a random time within 24 hours, so nobody can buy just to qualify and sell straight after.
3. The top 100 holders by balance are ranked. The pool, the liquidity curve and the dev, lock and prize wallets are excluded.
4. The tokens are sent from the prize pool wallet, and the wallet list and transaction links are published.

If fewer than 100 wallets hold the coin at the snapshot, each wallet still gets the per-wallet amount above and the rest stays in the prize pool. The longer you hold and the more you hold, the better your chance of a place in the top 100.

Pup Evolution

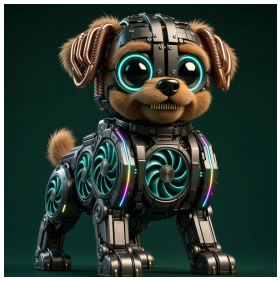

The pup is the symbol of the coin and he levels up with the market cap. Each stage is a real upgrade of the official mascot, not just a bonus round: the logo, banner and site artwork move to the new form when the stage unlocks, and the older forms stay in the gallery as the history of the project.

Pup
Launch

RTX Pup
$1M

H100 Pup
$10M

Blackwell Pup
$100M

Stage	Unlocks at	What changes
Pup	Launch	The starting form: the pup at his desk, fetching NVIDIA
RTX Pup	$1M	New mascot form and first reward round (25M $GPUPUP to the top 100)

Stage	Unlocks at	What changes
H100 Pup	$10M	New form, second reward round (15M), the Pup Family and the AI Pup launch
Blackwell Pup	$100M	Final form reveal and the last reward round (10M)

Every stage pairs a visible upgrade with a reward, so holders get something to see and something to hold for.

The AI Pup

The pup's purpose is to be the holder's assistant: an AI helper that explains the coin, the rewards and the NVIDIA and AI world in plain words. It informs and helps. It does not trade, hold anyone's funds or give financial advice.

It is built in three steps, and each step only starts when the one before it works.

1. **Pup Helper (built, going live).** A Telegram bot that answers common questions, shows the contract address and buy links, posts fetch reports and announces every buy and milestone. It reads the chain directly, so the numbers it posts can be checked.
2. **AI Pup (planned at $10M).** The same helper powered by a large language model. It answers holder questions in natural language from the project's own documents, explains NVIDIA and AI news in plain words, and writes the daily fetch report.
3. **Pup Agent (planned at $100M).** The AI Pup with tools. It looks up on-chain data to answer questions such as how much NVDAx the project has paid out or where a wallet ranks among holders, and drafts milestone and proof posts for a human to approve before they go out.

Two rules stay fixed at every step. The pup never takes custody of anyone's tokens, and every claim it makes about the coin links to a wallet or transaction anyone can open.

Trust and transparency

Every claim in this paper can be checked on-chain, and the checks are listed here so nobody has to take our word for them.

- **Dev tokens are locked.** 2.5% of supply is locked on Streamflow until 1 Dec 2026. The lock is on-chain and cannot be undone early. The link is on gpupup.io.
- **The prize pool is public.** The prize pool wallet shows its balance and every payout on Solscan.
- **Supply is fixed.** 1,000,000,000 tokens, and the contract address is published on every channel.
- **Payouts leave a trail.** Every reward round publishes the wallet list and the transaction links, and the bot saves the list as a file.
- **Nobody asks for your keys.** Admins never DM first, nobody asks for a wallet or seed phrase, and any DM that does is a scam.

Before the dev lock ends on 1 Dec 2026, we will publish what happens to those tokens, so holders hear the plan first.

Long-term roadmap

The plan is a long-term hold, not a quick flip: four phases, each unlocked by a market cap gate and paired with a mascot upgrade, a reward round and a new step for the AI Pup.

Launch	Phase 0 · now	Contract, site, public prize pool wallet, dev lock Telegram and X community, Pup Helper bot going live
Gate: market cap reaches $1M		
RTX Pup	Phase 1 · $1M	New mascot form and 25M $GPUPUP to the top 100 Holder snapshot at a random time within 24 hours
Gate: market cap reaches $10M		
H100 Pup	Phase 2 · $10M	15M round, the Pup Family and the AI Pup launch Language-model assistant for holder questions and news
Gate: market cap reaches $100M		
Blackwell Pup	Phase 3 · $100M	Final form reveal and the last 10M round Pup Agent with on-chain tools, human-approved posts

Phases do not run on dates, so a slow market means a slower roadmap, not a rushed one.

Risks and disclaimer

$GPUPUP is a memecoin. Its price can fall to zero, and you can lose everything you put in. Nothing here is financial advice, a promise of profit or an offer of securities.

- Rewards depend on trading volume and can be small or zero.
- Milestones, prize rounds and the AI Pup are plans. They depend on the market cap reaching each level and on the work being finished, and dates may change.
- NVDAx is a tokenised asset issued by a third party, and its price and availability are outside our control.
- Smart contracts and the platforms we use can have bugs or fail.
- Only put in what you can afford to lose, and do your own research.
